

# Meloxicam ER

Meloxicam ER injection is compounded using our patented SR polymer matrix delivery system designed to provide most small animals with the effects of Meloxicam for up to 72 hours post a single subcutaneous injection.

## Key Features of Compounded Meloxicam ER

- Provides extended release delivery of meloxicam in a fully biodegradable liquid polymer matrix
- Provides most small animals with the effects of Meloxicam for up to 72 hours post a single subcutaneous injection
- Formulation can be injected subcutaneously through needles as small as 23 gauge
- Meloxicam ER can be conveniently stored at room temperature

## ZooPharm

ZooPharm is a veterinary compounding pharmacy providing specialized veterinary anesthesia and pain management formulations for wildlife, zoo, exotic and companion animal veterinarians and their patients.

# Meloxicam ER

Visit us at [ZooPharm.com](http://ZooPharm.com) to view these and other studies on compounded medications:

**Pharmacokinetics of Sustained-release, Oral, and Subcutaneous Meloxicam over 72 Hours in Male Beagle Dogs,**  
*Brian J Smith, Stephen M Kirschner, and Lon V Kendall*

**Pharmacokinetics of 3 Formulations of Meloxicam in Cynomolgus Macaques (*Macaca fascicularis*),**  
*Cassandra Bauer, Patrice Frost, and Stephen Kirschner*

**CONTRAINDICATIONS: Meloxicam ER is contraindicated for use in cats.**

## Injection Guidelines

- Meloxicam ER can be injected through needles as small as 23 gauge, however it is recommended that a larger needle (16 to 18 gauge) be used to draw-up the Meloxicam ER from its vial. This makes syringe loading easier and minimizes loss in handling. Note: a luer-lock syringe is recommended for this technique.
- Once the required volume has been loaded into the injection syringe, simply remove/replace the larger needle with the smaller-gauge needle before administration

## How Supplied

Compounded Meloxicam ER injections are available in 2mg/ml and 10mg/ml concentrations in a 5ml vial.
